DATE MAILED: 11/21/2002

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/389,085

Applicant(s)

MULLINS, JOE H.

Examiner

Laura A Grier

Art Unit

2644

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-22 is/are pending in the application.
- 4a) Of the above claim(s) 11 is/are withdrawn from consideration.
- 5) ☒ Claim(s) 21 and 22 is/are allowed.
- 6) ☒ Claim(s) 1-3,6,7 and 14-16, 19-20 is/are rejected.
- 7) ☒ Claim(s) 4,5,8-10,17 and 18 is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on ____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. ____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) 3.
- 4) ☐ Interview Summary (PTO-413) Paper No(s) ____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

Art Unit: 2644

DETAILED ACTION

Claim Rejections - 35 USC § 112

1. **Claims 3 and 16** is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
2. Claim 3 recites the limitation "a second speaker" in line 1. There is insufficient antecedent basis for this limitation in the claim. Claim 3, has dependency from claim 1, and claim 1 does not recite the sensor comprising a speaker. The examiner suggests that claim 3 recite the limitation "a speaker".
3. Claim 16 recites the limitation "a second speaker" in line 1. There is insufficient antecedent basis for this limitation in the claim. Claim 16, has dependency from claim 14, and claim 14 does not recite the sensor comprising a speaker. The examiner suggests that claim 3 recite the limitation "a speaker".

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. **Claim 1-2, and 6-7** is rejected under 35 U.S.C. 103(a) as being unpatentable over Funahashi et al., U. S. Patent No. 6031919 in view of Hobelsberger, U. S. Patent No. 5327504.

Regarding **claim 1**, Funahashi et al. (herein, Funahashi) disclose a loudspeaker system and sound reproducing apparatus. Funahashi's disclosure comprises a audio system with a speaker system including a cabinet with a opening with a speaker mounted inversely therein; as well as passive radiator mounted opposite the speaker, both for emitting audio output, which is indicative of the "cabinet", "1st speaker", and "passive radiator". Further, Funahashi discloses a microphone means for sensing the output of the speaker and radiator. However, Funahashi does not disclose whether the sensing microphone is position within or outside of the cabinet. The examiner maintains that a sensor being located with a speaker cabinet was well known.

Regarding the sensor being located within the speaker cabinet, in a similar field of endeavor, Hobelsberger discloses a device to improve the bass reproduction in loudspeaker systems with a housing. Hobelsberger's disclosure comprises a sensor placed within a speaker housing (cabinet) for sensing pressure within a speaker enclosure (col. 3, lines 40-49).

It would have been obvious to one of the ordinary skill in the art at the time the invention was made to modify the invention of Funahashi by implement a sensor within the cabinet for the purpose of being able to sense pressure, which is generated between two structures and/or means.

Regarding **claim 2**, Funahashi and Hobelsberger disclose everything claimed as applied above (see claim 1). Funahashi further discloses an audio system comprising a speaker system providing and improved low frequency characteristic (col. 5, lines 23-27).

Regarding **claim 6**, Funahashi and Hobelsberger disclose everything claimed as applied above (see claim 1). Funahashi (col. 4. lines 43-59) and Hobelsberger (col. 3, lines 45-49), both further discloses an amplifier receiving an input via feed from the sensor which provides support of adjusting the output of the speaker based on the sensed pressure.

Art Unit: 2644

Regarding **claim 7**, Funahashi and Hobelsberger disclose everything claimed as applied above (see claim 1). Hobelsberger provide support of the speaker having a maximum width and the sensor having a sensor maximum width, wherein the width of sensor is smaller than the width of the speaker.

6. **Claims 12 and 19** are rejected under 35 U.S.C. 103(a) as being unpatentable over Funahashi and Hobelsberger and further in view of Bertagni et al. (herein, Funahashi combination).

Regarding **claims 12 and 19**, Funahashi and Hobelsberger disclose everything claimed as applied above (see claim 1 and 14, respectively). However, Funahashi and Hobelsberger fail to specifically disclose electrodynamic planar speaker. The examiner maintains that such a loudspeaker was well known in the art.

Regarding the electrodynamic planar speaker, in a similar field of endeavor, Bertagni disclose a planar diaphragm loudspeaker comprising electromagnetic drivers, which constitutes an electrodynamic planar speaker.

It would have been obvious to one of the ordinary skill in the art at the time the invention was made to modify the invention of Funahashi and Hobelsberger by incorporating an electrodynamic planar speaker for the purpose of dynamic quality and good efficiency in sound output; and with improved frequency response as taught by Bertagni in col. 3, lines 62-67.

7. **Claims 14 and 15** is rejected under 35 U.S.C. 103(a) as being unpatentable over Funahashi and Hobelsberger.

Regarding **claim 14**, Funahashi et al. (herein, Funahashi) disclose a loudspeaker system and sound reproducing apparatus. Funahashi's disclosure comprises a audio system with a speaker system including a cabinet with a opening with a speaker mounted inversely therein; as well as passive radiator mounted opposite the speaker, both for emitting audio output, which is indicative of the "cabinet", "1st speaker", and "passive radiator". Further, Funahashi discloses a microphone means for sensing the output of the speaker and radiator. Funahashi (col. 4. lines 43-59) discloses an amplifier receiving an input via feed from the sensor, which provides support of adjusting the output of the speaker based on the sensed pressure. However, Funahashi does not disclose whether the sensing microphone is position within or outside of the cabinet. The examiner maintains that a sensor being located with a speaker cabinet was well known.

Regarding the sensor being located within the speaker cabinet, in a similar field of endeavor, Hobelsberger discloses a device to improve the bass reproduction in loudspeaker systems with a housing. Hobelsberger's disclosure comprises a sensor placed within a speaker housing (cabinet) for sensing pressure within a speaker enclosure (col. 3, lines 40-49). Further, Hobelsberger (col. 3, lines 45-49), discloses an amplifier receiving an input via feed from the sensor, which provides support of adjusting the output of the speaker based on the sensed pressure.

It would have been obvious to one of the ordinary skill in the art at the time the invention was made to modify the invention of Funahashi by implement a sensor within the cabinet for the purpose of being able to sense pressure, which is generated between two structures and/or means.

Regarding **claim 15**, Funahashi and Hobelsberger disclose everything claimed as applied above (see claim 14). Funahashi further discloses an audio system comprising a speaker system providing and improved low frequency characteristic (col. 5, lines 23-27).

8. **Claims 13 and 20** are rejected under 35 U.S.C. 103(a) as being unpatentable over Funahashi and Hobelsberger.

Regarding **claims 13 and 20**, Funahashi and Hobelsberger disclose everything claimed as applied above (see claim 1 and 14, respectively). However, Funahashi and Hobelsberger fail to specifically disclose electrostatic planar speaker. The examiner takes official notice of the fact that an electrostatic planar speaker was well known in the art.

It would have been obvious to one of the ordinary skill in the art at the time the invention was made to modify the invention of Funahashi and Hobelsberger by providing an electrostatic planar speaker for the purpose of employing a small speaker in size, yet providing good sound quality.

Allowable Subject Matter

9. **Claims 21 and 22** are allowed.

10. **Claims 4-5, 8-10, 17-18** are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

11. Applicant's arguments with respect to claims 1-20 have been considered but are moot in view of the new ground(s) of rejection.

The applicant argues that the prior art of record fails to disclose the limitation of the claimed invention, specifically in regards to the limitation of comprising a "passive radiator and a loudspeaker". Further the applicant essentially argues that the references of prior art used fail to provide sufficient obviousness and motivation. The examiner has provided new references in support of the claimed invention with a loudspeaker and passive radiator positioned in a cabinet.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Laura A Grier whose telephone number is (703) 306-4819. The examiner can normally be reached on Monday - Friday, 7:30 am - 4:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Forester W. Isen can be reached on (703) 305-4386.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks

Washington, D.C. 20231

Or faxed to:

(703) 872-9314 (for Technology Center 2600 only)

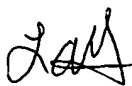

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington, VA, Sixth Floor (Receptionist).

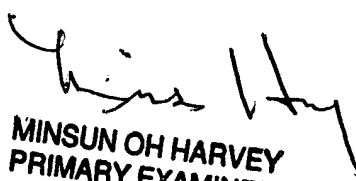

Application/Control Number: 09/389,085

Page 8

Art Unit: 2644

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-4700.
